

# WATERSTOP TAPE

## **AREA OF USE**

- Tunnels, Subways and Dams
- Sewer Systems
- Water Tanks and Channels
- Industrial Buildings and Bridges
- Treatment Plants and Pools

## WATERSTOP TAPE

### *Measure for Water Leak and Constructional Deformation*

*Water stop tape is used when pouring concrete in order to avoid water leak in concrete expansion joints and constructional deformations.*

*Constructions are exposed to linear and vertical pressures continuously and the move or compression of ground below the construction lead to collapse. Therefore PVC plastic water stop tapes should be used in constructions to avoid form changes, deterioration and ensure waterproofing.*
